Course Description 4th Semester Core Courses

MIC-18401CR: PROJECT WORK

(Credits 12)

Objectives: This component shall inculcate in students the scientific temperament for finding solutions to the research problems. A student shall be required to select a research problem and perform experiments independently under the mentorship of a designated teacher. The methodology adopted and the findings of the study are to be compiled in a scientific manner and submitted to the department for evaluation in the form of a dissertation. A presentation of the methodology and finding should be made by the student in front of the scientific audience comprising of teachers, research scholars and the fellow students.

MIC-18402CR: PRESENTATION AND VIVA-VOCE*

(Credits 2)

MIC-18403DCE

SPECIAL PAPER (Credits 4)

Objectives: This paper will be separately designed for each student based on their area of interest to be decided in consultation with teachers. The study of the special paper shall lead to the advancement of knowledge of the students in at least one of the relevant areas of microbiology which in turn may decide their future study interests.
